Apps Script Web App Ideas

Beginner-friendly projects for school admin and clerical workflows.

How to use this idea menu:
Pick one project idea that matches a real workflow at your school. Tell AI the project name, who will use it, what data it should read or save, and what actions users should be able to take. These ideas focus on **Google Apps Script web apps**, but many can also connect to Sheets, Forms, Docs, Drive, Gmail, and Calendar.

The Web App Project Prompt Formula

"I am a beginner using Google Apps Script. Build a web app for [**project idea**]. The users are [**staff/admin/clerical/families/students**]. The app should have pages for [**dashboard/form/search/reports/admin/settings/help**]. It should save data to [**Google Sheet**] and connect to [**Gmail/Calendar/Docs/Drive if needed**]. Give me the files, setup steps, deployment steps, and testing checklist."

Project Categories

Student support	Behavior, attendance, intervention, counseling, check-ins, meeting notes.
Office workflows	Requests, records, enrollment, transportation, appointments, file uploads.
Dashboards and reports	KPIs, Chart.js graphs, printable reports, data quality checks.
Communication	Email previews, draft centers, family notices, staff reminders.
Admin controls	Role access, settings pages, action logs, deployment and sharing practices.

Apps Script Web App Ideas

1. Behavior Incident Intake and Review Portal

Starter prompt: "Build a Google Apps Script web app for collecting and reviewing behavior incidents. Include a staff intake form, admin review dashboard, status updates, charts, email notifications, and an action log."

What the web app creates

A web app where staff submit behavior incidents and administrators review, assign, filter, and close them from a dashboard. Data saves to a Google Sheet.

Pages and features to include

- Staff incident submission form.
- Admin dashboard with pending, assigned, and closed incidents.
- Filterable table by date, grade, location, student, and status.
- Chart.js graphs for incidents by month, location, and type.
- Status buttons such as Review, Assign, Follow Up, and Close.

School workflow use cases

- Office staff enter incidents from paper notes.
- Administrators monitor referrals by grade or location.
- Leadership reviews monthly patterns.
- Counselors or deans track follow-up needs.

What this project teaches

- HTML forms, dashboards, filters, Chart.js, role-based pages, email alerts, action logs.

Apps Script Web App Ideas

2. Attendance Early Warning Dashboard

Starter prompt: "Build a web app dashboard that identifies students with attendance concerns from a Google Sheet. Include KPI cards, filters, Chart.js graphs, student detail modals, and draft follow-up emails."

What the web app creates

A dashboard that turns attendance data into a support tool. It highlights students below thresholds and helps staff start follow-up actions.

Pages and features to include

- KPI cards for below 90 percent, below 80 percent, and chronic absence.
- Filters by grade, counselor, student group, and date range.
- Student detail modal with attendance summary and notes.
- Draft email button for family or staff follow-up.
- Printable concern list for meetings.

School workflow use cases

- Weekly attendance team meetings.
- Counselor or administrator caseload reviews.
- Clerical follow-up for missing notes or excuse documentation.
- Leadership monitoring attendance trends.

What this project teaches

- KPI cards, thresholds, student lookup, email drafts, report printing, FERPA-aware sharing.

Apps Script Web App Ideas

3. Intervention Tracker Web App

Starter prompt: "Create a web app for tracking student interventions. Include an intake form, dashboard, overdue follow-up list, student detail page, and printable intervention report."

What the web app creates

A web app where staff log interventions, assign responsible staff, track due dates, and monitor whether supports are open, overdue, or complete.

Pages and features to include

- Add Intervention form.
- Dashboard with open, overdue, and completed interventions.
- Filterable table by student, staff member, grade, and status.
- Follow-up reminders or draft emails.
- Printable student support summary.

School workflow use cases

- MTSS or RTI team tracking.
- Counselor follow-up management.
- Administrator review before student support meetings.
- Documentation for support plans.

What this project teaches

- Status workflows, due date logic, dashboard KPIs, printable reports, student detail pages.

Apps Script Web App Ideas

4. Family Contact Log Portal

Starter prompt: "Build a web app for logging family communication. Include a contact form, search page, follow-up dashboard, draft email options, and an action log."

What the web app creates

A staff-friendly portal for recording calls, emails, meetings, and next steps with families.

Pages and features to include

- Contact log form.
- Search by student, guardian, staff member, or date.
- Follow-up needed dashboard.
- Email draft preview page.
- Export or printable contact history.

School workflow use cases

- Teachers document family outreach.
- Office staff record calls from guardians.
- Administrators review contact history before meetings.
- Counselors track next-step communication.

What this project teaches

- Forms, search pages, status filters, email drafts, print-friendly reports.

Apps Script Web App Ideas

5. Staff Request and Ticket Portal

Starter prompt: "Create a staff request web app with a request form, routing by category, status dashboard, assignment buttons, email updates, and a searchable history."

What the web app creates

A simple ticket system for school operations. Staff submit requests and office/admin teams process them from a shared dashboard.

Pages and features to include

- Request submission form.
- Category routing for office, tech, facilities, counseling, records, or supplies.
- Status dashboard with Pending, In Progress, Waiting, and Complete.
- Assigned staff field and action buttons.
- Email update or draft update to submitter.

School workflow use cases

- Front office task management.
- Tech and facilities request triage.
- Clerical work queue.
- Administrative support requests.

What this project teaches

- Routing, status updates, searchable tables, role access, email confirmations, action logs.

Apps Script Web App Ideas

6. Enrollment Document Collection Portal

Starter prompt: "Build a web app for collecting enrollment documents. Include a family-facing upload form, document checklist, staff review dashboard, status updates, and secure Drive storage."

What the web app creates

A portal for families or staff to submit required documents and for office staff to track what has been received.

Pages and features to include

- Document upload form.
- Checklist by student or family.
- Staff review table with Missing, Received, Reviewed, and Accepted statuses.
- Drive folder saving and file links in a Sheet.
- Confirmation message and optional email.

School workflow use cases

- Enrollment paperwork collection.
- Residency or records document tracking.
- Registration events.
- New student intake.

What this project teaches

- File upload, Drive folders, status dashboards, access control, confirmation pages.

Apps Script Web App Ideas

7. Records Request Tracker

Starter prompt: "Create a records request web app for submitting, assigning, processing, and closing student records requests. Include a request form, staff dashboard, due dates, file links, and email updates."

What the web app creates

A clerical workflow tool for tracking record requests from families, schools, or internal staff.

Pages and features to include

- Request intake form.
- Dashboard of pending and overdue requests.
- Assignment and completion buttons.
- File upload or Drive link storage.
- Email preview for request updates.

School workflow use cases

- Transcript or cumulative file requests.
- Enrollment records transfer.
- Internal documentation requests.
- Office accountability for request turnaround time.

What this project teaches

- Due dates, status buttons, Drive links, email previews, printable reports.

Apps Script Web App Ideas

8. Parent Conference Scheduler

Starter prompt: "Build a parent conference scheduler web app. Show available slots from a Google Sheet, prevent overbooking, save sign-ups, send confirmations, and create Calendar events."

What the web app creates

A web app where families or staff choose available appointment slots and receive confirmation.

Pages and features to include

- Available slots page.
- Sign-up form.
- Capacity or one-person-per-slot rules.
- Confirmation page and email.
- Calendar event creation for selected slots.

School workflow use cases

- Parent-teacher conference nights.
- Counselor or administrator appointments.
- Records or enrollment appointments.
- Student support meeting scheduling.

What this project teaches

- Slot logic, CalendarApp, confirmation emails, sheet updates, mobile-friendly pages.

Apps Script Web App Ideas

9. Counseling Referral and Check-In Portal

Starter prompt: "Create a counseling referral web app with referral form, urgency field, counselor dashboard, student check-in history, status updates, and protected access."

What the web app creates

A student support portal for collecting counseling referrals and tracking follow-up.

Pages and features to include

- Referral or check-in form.
- Counselor dashboard with urgency and status filters.
- Student detail page or modal.
- Follow-up notes and status updates.
- Role-based access for counseling staff.

School workflow use cases

- Staff submit student concerns.
- Counselors triage support requests.
- Administrators monitor volume without seeing unnecessary details.
- Support teams track follow-up completion.

What this project teaches

- Sensitive data handling, role access, filtered dashboards, notes, status workflows.

Apps Script Web App Ideas

10. Student Check-In Dashboard

Starter prompt: "Build a student check-in web app with a quick check-in form, mood or need indicators, dashboard graphs, student detail views, and follow-up flags."

What the web app creates

A web app for collecting check-ins and turning them into useful support signals.

Pages and features to include

- Simple student check-in form.
- Dashboard showing green, yellow, red, or custom categories.
- Chart.js trend graphs.
- Follow-up-needed list.
- Student history page or modal.

School workflow use cases

- Advisory check-ins.
- Counseling or mentoring programs.
- Attendance recovery support.
- After-school or tutoring programs.

What this project teaches

- Form design, dashboards, charts, student history, follow-up flags.

Apps Script Web App Ideas

11. Discipline Dashboard and Reports Center

Starter prompt: "Create a discipline dashboard web app with KPI cards, Chart.js graphs, filters, printable monthly reports, and admin-only access."

What the web app creates

A reporting dashboard that summarizes discipline or behavior data for administrators.

Pages and features to include

- KPI cards for total incidents, open incidents, repeat incidents, and closed incidents.
- Charts by grade, location, type, time of day, and month.
- Filters by date range and student group.
- Printable report page.
- Admin-only role access.

School workflow use cases

- Leadership team meetings.
- Campus climate reviews.
- Grade-level support planning.
- Monitoring patterns in locations or times.

What this project teaches

- Chart.js, KPIs, filters, reports, deployment and domain sharing decisions.

Apps Script Web App Ideas

12. Office Appointment and Visitor Log

Starter prompt: "Build an office appointment and visitor log web app. Include check-in form, appointment dashboard, badge or notes field, status updates, and daily printable log."

What the web app creates

A front office web app for tracking appointments, visits, and office interactions.

Pages and features to include

- Appointment or visit check-in form.
- Today's visits dashboard.
- Status buttons for Waiting, Seen, Completed, or No Show.
- Notes field for clerical staff.
- Printable daily log.

School workflow use cases

- Enrollment appointments.
- Family meetings.
- Records pickup.
- Office traffic tracking.

What this project teaches

- Date filters, daily dashboards, status updates, print-friendly pages.

Apps Script Web App Ideas

13. Transportation Change Request Portal

Starter prompt: “Create a transportation change request web app with a family or staff form, review dashboard, approval status, email confirmation, and daily report.”

What the web app creates

A request tool for temporary or permanent transportation changes.

Pages and features to include

- Request submission form.
- Review dashboard for office staff.
- Status buttons for Received, Approved, Denied, and Completed.
- Confirmation email or draft.
- Daily printable transportation change list.

School workflow use cases

- Bus change requests.
- Pickup authorization updates.
- Same-day office communication.
- Family notification tracking.

What this project teaches

- Forms, approvals, printable reports, email confirmations, action logs.

Apps Script Web App Ideas

14. Chromebook or Device Repair Portal

Starter prompt: "Build a device repair web app with issue intake, photo or file upload, ticket dashboard, assignment, status updates, and email notifications."

What the web app creates

A web app for tracking technology issues, repairs, and device loans.

Pages and features to include

- Repair or support request form.
- Optional file upload for issue photos or supporting files.
- Ticket dashboard with status and assigned staff.
- Email updates to submitter.
- Repair history search.

School workflow use cases

- Student Chromebook repairs.
- Staff tech support requests.
- Device loan tracking.
- Repeated issue monitoring.

What this project teaches

- File upload, ticket workflow, status dashboards, search, email updates.

Apps Script Web App Ideas

15. Inventory Checkout Web App

Starter prompt: "Create an inventory checkout web app for school equipment or resources. Include item list, checkout form, due dates, overdue dashboard, and reminder drafts."

What the web app creates

A web app for checking out items and monitoring returns.

Pages and features to include

- Inventory item table.
- Checkout and return forms.
- Due date tracking.
- Overdue dashboard.
- Reminder email draft page.

School workflow use cases

- Devices, hotspots, calculators, instruments, books, or supplies.
- Office equipment checkout.
- Department resource sharing.
- Return reminders.

What this project teaches

- Searchable tables, date logic, status updates, email previews, inventory workflows.

Apps Script Web App Ideas

16. Staff Duty and Coverage Scheduler

Starter prompt: "Build a staff duty and coverage scheduler web app. Include duty request form, open coverage table, assignment buttons, Calendar events, and staff reminders."

What the web app creates

A scheduling helper for coverage, duty assignments, and staff commitments.

Pages and features to include

- Coverage or duty request form.
- Open assignments dashboard.
- Assignment buttons for admin or clerical users.
- Calendar event creation.
- Reminder drafts or emails.

School workflow use cases

- Lunch duty scheduling.
- Testing coverage.
- Substitute gaps or class coverage.
- Event staffing.

What this project teaches

- Scheduling, CalendarApp, role-based assignment, reminders, dashboards.

Apps Script Web App Ideas

17. Professional Learning Sign-Up Portal

Starter prompt: "Create a professional learning sign-up web app with sessions, capacity limits, waitlist, confirmation emails, and attendance dashboard."

What the web app creates

A web app for managing staff sign-ups for professional learning sessions.

Pages and features to include

- Session list from a Sheet.
- Sign-up form.
- Capacity and waitlist handling.
- Confirmation email.
- Attendance or completion dashboard.

School workflow use cases

- Campus professional learning days.
- District training sessions.
- Department workshops.
- Compliance training tracking.

What this project teaches

- Capacity logic, confirmation emails, dashboards, attendance tracking.

Apps Script Web App Ideas

18. Field Trip Approval Workflow

Starter prompt: "Build a field trip approval web app with request form, document upload, approval dashboard, status updates, email notifications, and printable summary."

What the web app creates

A workflow tool for requesting, reviewing, approving, and tracking field trips.

Pages and features to include

- Field trip request form.
- Upload area for documents.
- Approval dashboard for administrators.
- Approve, Deny, Needs Info buttons.
- Printable trip summary.

School workflow use cases

- Teacher trip requests.
- Transportation and permission form tracking.
- Administrator approval workflow.
- Office documentation and deadlines.

What this project teaches

- Approvals, file upload, Drive links, status updates, email notifications.

Apps Script Web App Ideas

19. Purchase or Reimbursement Request Portal

Starter prompt: "Create a purchase or reimbursement request web app with itemized request form, receipt upload, approval workflow, status dashboard, and email updates."

What the web app creates

A clerical/admin workflow for tracking spending requests and reimbursements.

Pages and features to include

- Request form with budget, vendor, amount, and reason.
- Receipt or quote upload.
- Approval dashboard.
- Status updates and email notifications.
- Printable request summary.

School workflow use cases

- Teacher supply requests.
- Department purchase approvals.
- Reimbursement tracking.
- Office documentation for finance processes.

What this project teaches

- Forms, file uploads, approvals, printable summaries, action logs.

Apps Script Web App Ideas

20. Data Quality Review Web App

Starter prompt: "Build a data quality review web app that scans a Google Sheet for missing required fields, duplicate IDs, invalid emails, inconsistent statuses, and date problems."

What the web app creates

A web app that helps clerical staff clean up data before it causes workflow problems.

Pages and features to include

- Data check dashboard.
- Issue counts by type.
- Table of rows needing correction.
- Optional highlight-in-Sheet action.
- Printable or email summary.

School workflow use cases

- Enrollment records cleanup.
- Parent contact list review.
- Missing student IDs or invalid emails.
- Request tracker data cleanup.

What this project teaches

- Data validation, duplicate detection, dashboards, reports, safer correction workflows.

Apps Script Web App Ideas

21. Missing Forms and Compliance Tracker

Starter prompt: "Create a missing forms tracker web app with student list, required forms checklist, missing item dashboard, family communication drafts, and completion status updates."

What the web app creates

A web app for tracking required forms, documents, acknowledgments, or compliance items.

Pages and features to include

- Student or family checklist.
- Missing forms dashboard.
- Search and filter by grade, teacher, or form type.
- Draft communication page.
- Completion buttons and timestamps.

School workflow use cases

- Enrollment paperwork.
- Athletic forms.
- Device agreements.
- Permission slips or annual acknowledgments.

What this project teaches

- Checklists, dashboards, family drafts, status updates, search.

Apps Script Web App Ideas

22. Student Support Meeting Agenda Generator

Starter prompt: "Build a web app that creates student support meeting agendas from selected student records, concerns, interventions, and next steps."

What the web app creates

A web app that helps teams prepare consistent meeting agendas using data already stored in a Sheet.

Pages and features to include

- Student search page.
- Select students or concerns for agenda.
- Google Docs template with `{{StudentName}}`, `{{Concern}}`, and `{{NextStep}}` placeholders.
- Generate Doc button.
- Link to generated agenda.

School workflow use cases

- MTSS meetings.
- Grade-level student support meetings.
- Counselor/admin planning meetings.
- Intervention review meetings.

What this project teaches

- Document templates, placeholders, search, selected records, Drive links.

Apps Script Web App Ideas

23. Award and Certificate Generator

Starter prompt: “Create a certificate generator web app using a Google Docs template with placeholders like {{StudentName}}, {{AwardName}}, and {{Date}}.”

What the web app creates

A web app that creates personalized certificates or recognition letters from a form or spreadsheet list.

Pages and features to include

- Student or recipient list.
- Award selection form.
- Google Docs template with placeholders.
- Generate Docs button.
- Drive folder links and optional sharing.

School workflow use cases

- Attendance awards.
- Honor roll or growth recognition.
- Staff appreciation certificates.
- Student leadership recognition.

What this project teaches

- Placeholder templates, batch document creation, Drive organization, status tracking.

Apps Script Web App Ideas

24. Family Resource Request Portal

Starter prompt: "Build a family resource request web app with request form, category routing, staff dashboard, status updates, and sensitive-data-aware access settings."

What the web app creates

A web app for collecting and tracking requests for school or community support resources.

Pages and features to include

- Family or staff request form.
- Category routing.
- Staff review dashboard.
- Notes and status updates.
- Confirmation and follow-up emails or drafts.

School workflow use cases

- Clothing, food, supplies, counseling, or community resource requests.
- Family engagement team workflows.
- Counselor and social worker follow-up.
- Documentation of support provided.

What this project teaches

- Routing, sensitive data caution, role access, status dashboards, action logs.

Apps Script Web App Ideas

25. QR Code Request Portal

Starter prompt: "Create a mobile-friendly web app request portal that opens from a QR code and lets users submit a specific school request quickly."

What the web app creates

A lightweight mobile-first web app designed to be opened from a QR code.

Pages and features to include

- Simple landing page.
- Short request form.
- Confirmation message.
- Staff dashboard.
- Optional routing or email confirmation.

School workflow use cases

- Staff scan a QR code to report a tech or facilities issue.
- Families scan a QR code at registration.
- Students scan a QR code to request support.
- Office staff post QR codes at service counters.

What this project teaches

- Mobile layout, short forms, QR-friendly design, confirmation pages, routing.

Apps Script Web App Ideas

26. Role-Based Admin Hub

Starter prompt: “Build a role-based admin hub web app where different users see different pages based on their email or role stored in an Authorized Users Sheet.”

What the web app creates

A web app that acts as a central dashboard but shows different pages or buttons depending on the user’s role.

Pages and features to include

- Home page with role-aware navigation.
- Authorized Users or Roles tab.
- Admin-only dashboard.
- Staff submission page.
- Access denied page and action log.

School workflow use cases

- Teachers submit requests while administrators review them.
- Office staff process records while leadership sees dashboards.
- Counselors access support tools while other staff see only intake forms.
- Principal has live email tools while staff can only create drafts.

What this project teaches

- User email checks, role-based pages, domain sharing, access denied handling, logs.

Apps Script Web App Ideas

27. Settings-Controlled Web App

Starter prompt: "Create a web app with an admin settings page so authorized users can update categories, routing emails, thresholds, and display labels without editing code."

What the web app creates

A project where the app reads settings from a Google Sheet instead of hard-coding every option.

Pages and features to include

- Settings page.
- Settings Sheet tab.
- Editable routing emails and categories.
- Editable dashboard thresholds.
- Change log for settings updates.

School workflow use cases

- Change behavior referral routing when admin assignments change.
- Update attendance thresholds by program.
- Maintain lists of departments, grade levels, staff, or request categories.
- Keep a tool usable across school years.

What this project teaches

- Settings pages, admin access, configuration tables, validation, logs.

Apps Script Web App Ideas

28. Printable Leadership Report Center

Starter prompt: "Build a web app report center with filters, KPI summaries, Chart.js graphs, and print-friendly pages for leadership meetings."

What the web app creates

A web app that turns operational data into meeting-ready reports.

Pages and features to include

- Report filters by date, grade, category, or staff.
- KPI summary section.
- Chart.js graphs.
- Printable report layout.
- Notes or interpretation section.

School workflow use cases

- Weekly attendance leadership report.
- Monthly behavior trend report.
- Student support progress report.
- Office request completion report.

What this project teaches

- Reports, filters, charts, print CSS, leadership-friendly summaries.

Apps Script Web App Ideas

29. Email Preview and Draft Center

Starter prompt: “Create a web app page where users preview generated emails before creating Gmail drafts or sending messages.”

What the web app creates

A safer communication tool where users review messages before anything is sent.

Pages and features to include

- Select records from a table.
- Preview recipient, subject, and body.
- Edit or confirm message.
- Create Gmail Draft button.
- Action log of drafts created.

School workflow use cases

- Parent follow-up communication.
- Staff reminders from overdue tasks.
- Attendance or behavior alert drafts.
- Office update messages.

What this project teaches

- Email previews, Gmail drafts, selected records, safe communication workflows.

Apps Script Web App Ideas

30. Student Concern Triage Portal

Starter prompt: “Build a student concern triage web app where staff submit concerns and the support team categorizes, assigns, prioritizes, and follows up.”

What the web app creates

A student support workflow that turns informal concerns into trackable follow-up actions.

Pages and features to include

- Concern intake form.
- Priority and category fields.
- Triage dashboard.
- Assignment and follow-up buttons.
- Student detail history.

School workflow use cases

- Academic, attendance, behavior, wellness, or family concerns.
- Counselor and administrator triage.
- Grade-level team follow-up.
- Documentation before meetings.

What this project teaches

- Intake forms, triage dashboards, assignment workflows, student history, access control.

Apps Script Web App Ideas

31. Early College, Credit, or Graduation Tracker

Starter prompt: "Create a student progress tracker web app with KPI cards, searchable student records, progress graphs, and follow-up flags."

What the web app creates

A dashboard for monitoring progress toward credits, requirements, milestones, or program completion.

Pages and features to include

- Student progress search.
- KPI cards for on track, off track, missing requirement, and needs review.
- Graphs by cohort, grade, or program.
- Student detail modal.
- Follow-up task or draft email.

School workflow use cases

- Graduation tracking.
- Credit recovery monitoring.
- Early college or pathway completion.
- Program requirement tracking.

What this project teaches

- KPI logic, student search, graphs, detail pages, follow-up workflows.

Apps Script Web App Ideas

32. Help Desk Knowledge and Request Hub

Starter prompt: "Build a web app that combines a help knowledge page, request form, searchable FAQs, and ticket dashboard for school staff."

What the web app creates

A support hub where users can find answers before submitting a request, then submit and track tickets if needed.

Pages and features to include

- Help home page.
- Searchable FAQ or resource table.
- Request form.
- Ticket dashboard.
- Status update emails or drafts.

School workflow use cases

- Tech help desk.
- Front office process guide.
- Staff operations support.
- New staff onboarding.

What this project teaches

- Help pages, search, forms, ticket workflows, status dashboards.

Apps Script Web App Ideas

Build combinations and prompt checklist.

Good Web App Building Blocks

Dashboards	KPI cards, Chart.js graphs, filters, tables, detail modals.
Intake workflows	HTML forms, validation, confirmation pages, Sheet storage.
Review workflows	Searchable tables, status buttons, assignment fields, notes.
Communication	Email previews, Gmail drafts, confirmations, reminders.
Documents and files	Google Docs templates with `{{Placeholders}}`, Drive folders, uploads, sharing.
Security	Domain sharing, approved email lists, role-based pages, action logs.

Project Prompt Checklist

- Who will use the web app?
- What pages should the app have?
- What data should it read or save?
- What actions should users be able to take?
- What emails, Docs, Calendar events, Drive files, or reports should it create?
- What should be previewed before it is sent, shared, or changed?
- Who should have access, and should it be limited to the school domain?
- What sample data or short examples should be included in the final product?
